

OUR POWER, YOUR SATISFACTION

DIAMOND SERIES

Sanitary pumps

DX / JX / FX / DHX / JHX / FHX series

DX Hygienic Series

The DX hygienic pump series is state of the art for the food, pharmaceutical, chemical and cosmetic industries. The complete sanitary design, in compliance with standards EHEDG and 3A, ensures maximum sanitization. These pumps are top rated for " Clean In Place" and " Sterilizing In Place". The geometry of the pumps is designed specifically to allow drainage and avoid dead zones. Each component is manufactured with the highest level of finish and utmost cleanliness.

As well as the parts that come in contact with the product, the block and base plate (when requested) are made of stainless steel (standard in AISI 304).

The available fittings include DIN 11851, DIN 11864, Clamp ISO 2852, Clamp ASME-3A, Clamp DIN 32676, RJT, SMS 1145 and lastly Garolla and Macon for the wine industry.

The complete range of pumps can be manufactured with block construction (DXO SERIES and DXC SERIES), bearing housing with independent shaft (JXO SERIES and JXC SERIES) or bearing unit with plug-in shaft (FXO SERIES and FXC SERIES).

• **DX Series:** the drive is coupled directly to the pump via a flange. This solution is extremely cost effective and compact, considerably reducing installation costs and simplifying maintenance. The forces generated by the hydraulic part are supported by the drive itself. Each drive used is adequately selected based on their specific technical parameters and are subject to numerous duration tests with heavy loads.

• JX Series: the drive is connected to the shaft inlet via a flexible coupling. This configuration is the best solution in terms of performance and durability. All the forces generated by the pump are absorbed by the bearings in the housing. These bearings have very high resistance against loads. They are assembled with extreme precision on the highest quality manufactured parts. It is the best solution when you want to guarantee duration and reliability, yet with greater installation space requirements. The bearing unit designed by us is modular and can be adapted to a DX Series pump with lantern. It is state of the art for this type of installation.

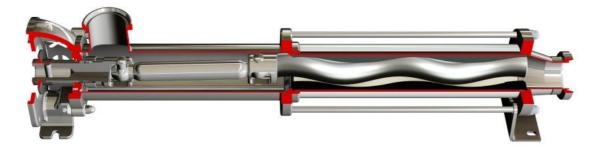

• FX Series: the drive is connected directly to the pump via a flange of the modular bearing unit. This is the most versatile solution because it allows to use gearbox with flange and standard output shaft, the connection with hydraulic and pneumatic motors, by keeping the simplicity and the compactness of the classic coupling flange solution and at the same time it ensures total reversibility and higher performance of the bearing unit. This modular bearing unit can be applied on all the Diamond series pumps and it allows a quick maintenance of the drive. FX is synonym of modularity and reliability with any kind of drive.

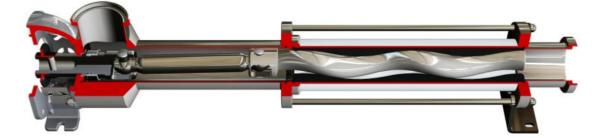

• **DXO serie**: the DXO series is a hygienic pump with open joint. It is the solution with the best sanitisation characteristics thanks to the design of the casing and the rotating parts completely free of dead zones and stagnation. The pin-type joint has been suitably sized to guarantee long duration. Lubrication of the joint is guaranteed by the product thanks to its open design, therefore it is suitable for non-abrasive fluids. Performance improves considerably when pumping lubricant products.

DXC serie: the DXC series is a hygienic pump with pin, standard to the DN series. This solution combines excellent sanitisation characteristics thanks to the design and casing completely free of dead zones and stagnation, together with the performance of the pin-type joint patented in the Diamond series. Lubrication of the pin is independent of the pumped product, therefore it is also suitable for abrasive fluids.

DXO serie EHEDG design: the DXO serie is designed according to EHEDG (European Hygienic Equipment Design Group) regulation. The sanitary open pin transmission is the best sanification solution in cleaning cycle phase. The pump guarantee the inside cleaning by cleaning in place, respect the standard DXO, reduced up to 35% of quantity of cleaning agent used during the cleaning cycle getting an economic saving. Lower flow rate to cleaning in place is lower chemical product using and is lower stress hydraulic components (in special the stator) therefore greater during the components.

DHX Hygienic Series

The DHX hygienic pump series with hopper an auger feed screw to convey directly the product to hydraulic part, is the ideal machines for pumping viscous and non-flowing, with a very high solids content. Suitable for pumping substances poorly flowing up to 18% of dry substance which does not tend to form a bridge.

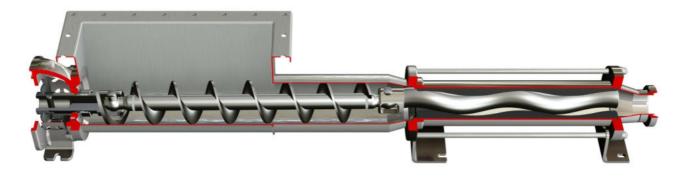

The complete sanitary design, in compliance with standards EHEDG and 3A, ensures maximum sanitization. These pumps are top rated for " Clean In Place" and " Sterilizing In Place". The geometry of the pumps is designed specifically to allow drainage and avoid dead zones. Each component is manufactured with the highest level of finish and utmost cleanliness.

As well as the parts that come in contact with the product, the block and base plate (when requested) are made of stainless steel (standard in AISI 304).

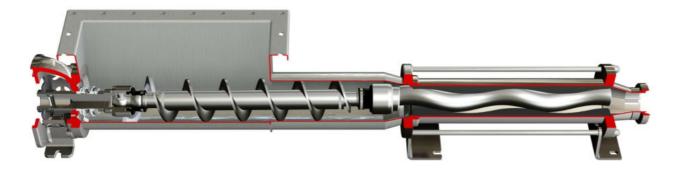

The available fittings include DIN 11851, DIN 11864, Clamp ISO 2852, Clamp ASME-3A, Clamp DIN 32676, RJT, SMS 1145 and lastly Garolla and Macon for the wine industry.

The complete range of pumps can be manufactured with block construction (DHXO SERIES and DHXC SERIES), bearing housing with independent shaft (JHXO SERIES and JHXC SERIES) or bearing unit with plug-in shaft (FHXO SERIES and FHXC SERIES).

• **DHXO serie**: the DHXO series is a hygienic hopper pump with open joint. It is the solution with the best sanitisation characteristics thanks to the design of the casing and the rotating parts completely free of dead zones and stagnation. The pin-type joint has been suitably sized to guarantee long duration. Lubrication of the joint is guaranteed by the product thanks to its open design, therefore it is suitable for non-abrasive fluids. Performance improves considerably when pumping lubricant products.

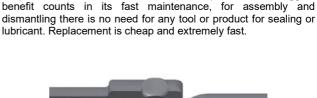

• **DHXC serie:** the DHXC series is a hygienic hopper pump with pin, standard to the DN series. This solution combines excellent sanitisation characteristics thanks to the design and casing completely free of dead zones and stagnation, together with the performance of the pin-type joint patented in the Diamond series. Lubrication of the pin is independent of the pumped product, therefore it is also suitable for abrasive fluids.

Patented Pin Joint (DXC Series): the pin-type joint, the actual heart of the single screw pump, is the best solution of its type on the market. It offers greater duration, reliability and maintenance costs, managing to combine extreme compactness with unrivalled strength. Its particular manufacturing enables the sub-division of axial loads and torque in different elements, making it one of a kind. As well as the above, replacement of worn parts is cheap thanks to the bushes in the worn zones, avoiding costly replacement of parts (rotor, drive shaft, and female drive shaft. To resist high pressure in the pump casing up to 12 bar, the pin can be hydraulically balanced.

Open Joint (DXO Series): open joint with superior sanitization

characteristics. Lubrication is guaranteed of the pumped product thanks to the mechanical geometry that enables direct entry in

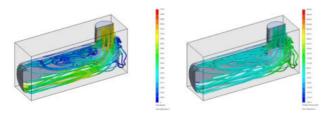

contact with the sliding parts. This joint is particularly strong

thanks to the dimensions designed to ensure its performance

despite the lack of lubrication with specific products. The biggest

CFD analysis: the x sanitary series is designed to guarantee the maximum sanification inside casings. Using the computational fluid dynamic CFD was optimized the internal design of the machines by checking the turbulence and washing rates based on the correct flow rate during the sanitization cycle.

Versatility: the Diamond series was designed to be versatile whatever its use. For this reason it can be set up with optionals and accessories suitable for every field of application. As well as the above, the peculiar features of the single screw pump are naturally taken advantage of with various types of fluids pumped, from low to the highest viscosity, clean and containing solids varying in size and nature.

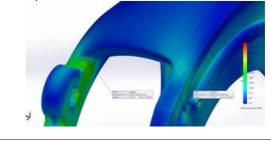

Base plates: the base plates are characterized by considerable thicknesses are very strong. They are made in stainless steel as standard. They can be provided with hygienic housing, with adjustable anti-vibration, in the trolley version or on skids, based on the client's specifications.

Low pulsating flows: tensional stress and pulsating flow very low. The effect of the centrifuge is reduced to the minimum thanks to the low operating rotations and the mainly axial development of the pump.

Performance: duration, efficiency, reliability and low consumption. With the Diamond series, we have reached the maximum levels of technological development in every aspect.

FEM calculation: the structural components of X series sanitary pumps are designed by the finite element method FEM. The geometries refine to have optimize the weight and the cost of each component.

Materials: the parts in contact with the product of the Diamond DXC and DXO series pumps can be in stainless steel (AISI 304 e AISI 316), on request in other materials such as Duplex and Super Duplex. All parts have excellent finishes and the casings are polished to ensure utmost sanitization of the surfaces.

Shaft sealing: different sealing systems can be installed, each solution being suitable to specific usage The types available are: single acting mechanical seal, with quench, double acting mechanical seal back to back or tandem. The type of seals are all interchangeable on the standard pump. Each solution was carefully engineered while taking into consideration all the operating conditions. You can also install various types of mechanical seals based on the application. The inner seals are in the advanced position for greater coverage of the pumped product, promoting its duration and cleaning.

Modularity: the Diamond series is based on the concept of modularity in every characteristic: hydraulic parts, casing, seals, base plates, housing, drive shafts. Each part can be manufactured in a series of variants without changing the structure of the machine, while keeping the main spare parts standard

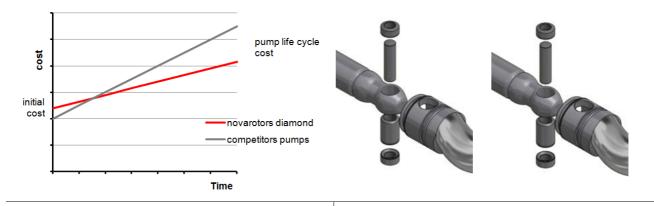

Efficiency: maximum performance level, exceptional operating efficiency thanks to the optimum volumetric yield and high pressure and consumption reduced to the minimum. All the Diamond series hydraulics were calculated to guarantee the maximum found on today's market.

series have been tested for long periods and subject to strict and quali rigorous technical checks. We can install both electric and basis	uality each part is manufactured according the highly restrictive uality specifications. Finishes and precision of each part are the asis of each pump manufactured. All parts are subject to specific ontrols based on their characteristics and functionality.
--	--

Maintenance: the Diamond series is designed to ensure easy maintenance and normally require on the replacement of a minimum number of components .

In particular the joint bushes allow the replace of the same without having to replace shafts and rotors.

The costs of maintenance are really reduced . The cost of the pump, considered in his full life cycle , is highly competitive .

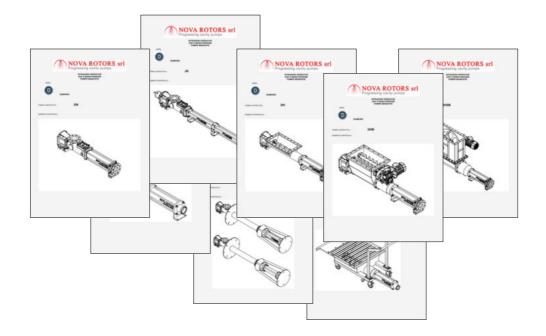

Cost / benefit : the Diamond series , thanks to the compactness of its elements combined technical success without comparison at very competitive costs . The modularity allows you to make the right solutions depending on the application to avoid paying for features you do not need , all in favor of competitiveness compact design and fluid dynamic .

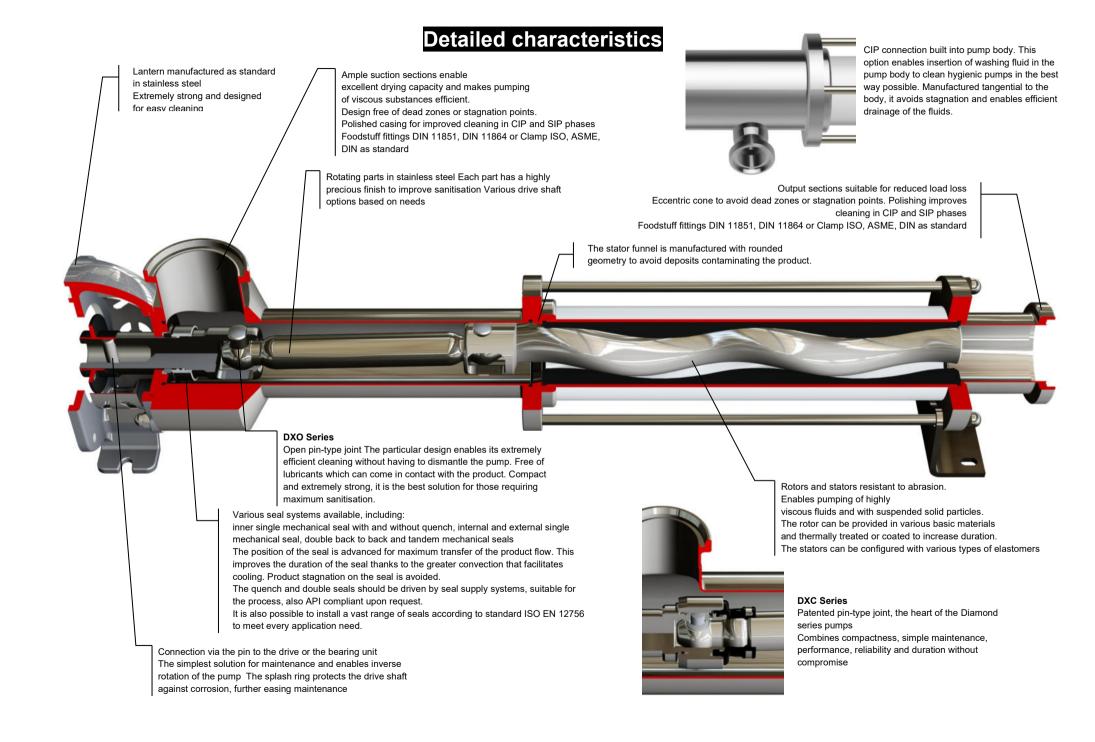

Selfpriming: the peculiarities of hydraulic parts of the progressive cavity pump allow excellent selpriming (up to 7m) . The Diamond series were designed to create the minimum loss possible in the pump body , thanks to large sections and a joint

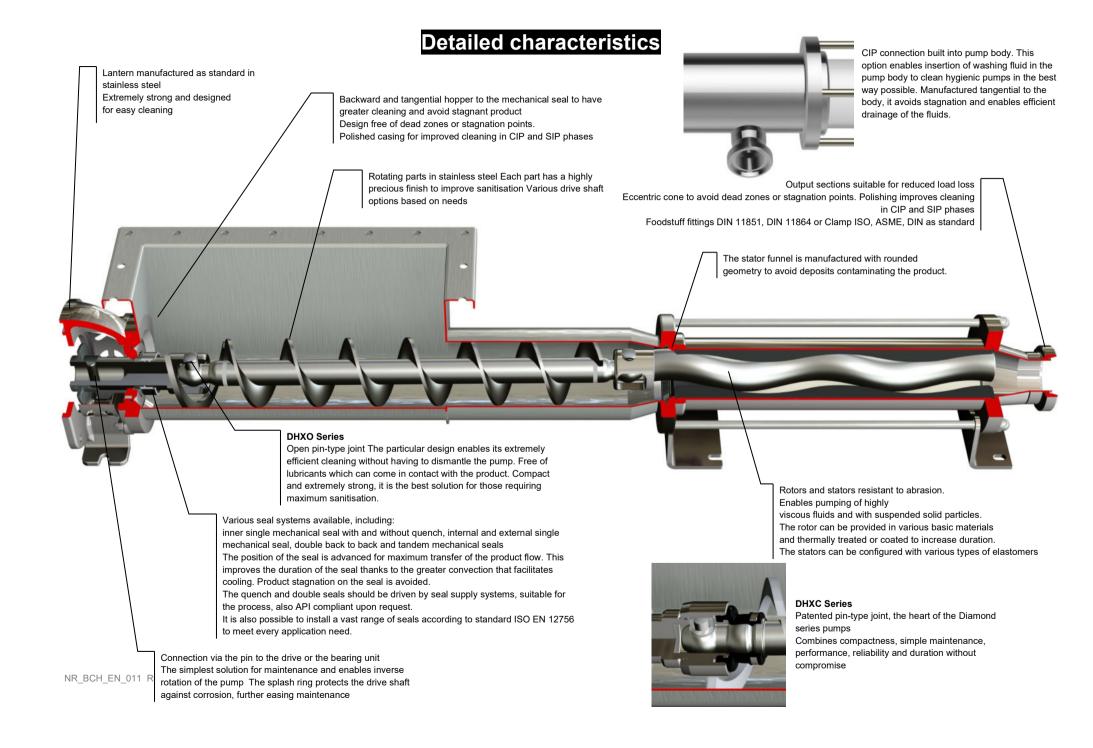

Ease of installation: the pumps of the Diamond series are easy to install due to compactness, simplicity of operation and operational flexibility thanks to the various features included.

Detailed documentation: each pump go with clear and detailed operating instructions. Orders are followed by experienced and qualified staff that integrates in providing detailed documentation on demand and specific for the product supplied.

VERSION AND OPTION

Casing material

Base materials: AISI 304,AISI 316

Materials of the sealing shaft

Base materials: AISI 304, AISI 316

Rotor materials

Base materials: AISI 420, AISI 304, AISI 316, F51(Duplex), F55 (Super Duplex) Heat treatments: Hardening induction (only on AISI 420) Coatings: Hardened Chrome plated HCP Chrome oxide plasma (ceramic coating) Tungsten carbide HVOF

Stator materials

Base materials: NBR, food grade NBR, white NBR food grade EPDM, EPDM food grade, white EPDM food grade FPM, FPM food grade HNBR, HNBR food grade SYLICON Buna-N (available on select models on request) HYPALON (available on select models on request) PTFE (available on select models on request)

Base plates

standard Base Base with anti-vibration housing (hygienic machine feet) Base with risers Skid with lifting devices Cart for industrial sector (trolley) Cart for food grade and winery sector (For details, see the brochure constructive options, equipment and installations)

Connections

DIN 11851 DIN 11864-1 / DIN 11864-2 / DIN 11864-3 Clamp ISO 2852, Clamp ASME-3A, Clamp DIN 32676 RJT SMS 1145 Garolla Macon

Sealing system

Single internal mechanical seal Single external mechanical seal Single mechanical seal with Quench Q0K9 (buffer-Quench-pot required) Back-to-back double mechanical seal D0K9 (pressurized flushing required) Tandem double mechanical seal K0K9 (buffer / flush required) Single or double cartridge seals also in API 682 version category 1 Seal supply systems are available also in accordance to API (For construction details, see the brochure sealing systems and seals)

Optional for coupling rod

Joint Protector Coupling rod with feed screw Antisettling impeller Balanced hydraulic joint (only on DXC series) (For details, see the brochure constructive options, equipment and installations)

Protection devices

Temperature probe for dry running protection (standard in the ATEX version) Flow switch Pressure switch Flanged overpressure valve Hygienic overpressure valve (For details, see the brochure constructive options, equipment and installations)

Control devices

Control panel Control panel with inverter Drive with integrated inverter (For details, see the brochure constructive options, equipment and installations)

Equipment and optional

Stator heating jacket Heating jacket for body pump Stainless steel stator cover Grinder CIP Connection integrated on the body pump Integrated Bypass in the pump construction Quench Pot flushing Lantern in stainless steel Hermetic Lantern Carter to protect the motorization (For details, see the brochure constructive options, equipment and installations)

Certifications

CE ATEX

FEATURES OF USE

Operating range

Flow Up to110m³/h Pressure Up to 24 bar for the standard series (48bar for the series K8) Temprature from -40°C until to 150°C

Typical applications

Enology, wine transfer Milk and diary Sugar industry Beverages industry Breweries Distilleries Tomato industry

TABLE OF MODELS

Flow and pressure

Size	Model	Qmax 2 bar [m³/h]	rpm max	P max [bar]
